

QUADRANT ENERGY IN WESTERN AUSTRALIA

As the largest single contributor to the WA domestic gas market, Quadrant Energy continues to be critical to the success of industry in Western Australia and an important contributor to the resource and energy base of the Australian economy.

We are committed to Western Australia's domestic gas market.

Our growth strategy comes from a solid platform:

- We are the leading supplier of domestic gas in Western Australia
- We supply gas under long term gas contracts to some of the largest and most respected industrial brands in Western Australia
- We are an established, reliable and secure energy supplier
- We protect our people, communities and environment
- We are an experienced Operator
- We have invested significant capital in offshore exploration to ensure the longevity of our supply, building on our strong history of success
- We are growth ready, with capacity to buy, find or convert supplies

DOMESTIC GAS FOCUS

Quadrant Energy's production assets are located in the resource rich Carnarvon Basin offshore north Western Australia, with multiple gas hubs feeding into WA's extensive natural gas pipeline network.

We are committed to developing Western Australia's domestic gas market by adding, finding and making available new gas reserves. In doing so we help sustain those industries that use natural gas as feedstock and support Western Australia's economy in accessing and transitioning to affordable, reliable, lower carbon emission power generation.

With competitive, reliable and long term gas supplies delivered from a network of established facilities, our focus is to capitalise on our business strengths and deliver stability and scale, growth and optionality for the business. This is evidenced in successful exploration wells in new and established production areas as well as substantial increases in available reserves from producing fields.

COMMITMENT TO SUSTAINABILITY

For Quadrant Energy, sustainability means managing our business so that we consider people, social, environmental and economic factors, with the aim of creating and preserving value for all our stakeholders.

An integral part of our business is building enduring relationships with the communities in which we operate through a lasting commitment to environmental stewardship, education, training, community development and rewarding careers.

Quadrant Energy highly values its local relationships and the permission to operate in the various Western Australian communities hosting our operations. We strive to use local suppliers and people to meet our business needs where practicable and competitive to do so.

With a focus on education, health, community development and environmental research, our community partnership funding has assisted a broad range of charities and not for profit organisations whose programs and services align to the four elements that underpin our business: Protection; People; Partners and Performance.

These partnerships include funding the Ronald McDonald House Family Resource Centre and Aboriginal Lounge at the new Perth Children's Hospital and support of the Western Australian Museum Foundation's various educational and environmental programs.

Quadrant Energy is also at the forefront of industry activity and programs to build understanding and insights into Western Australia's energy sector. As an active participant in a number of industry organisations including the Australian Petroleum Production & Exploration Association (APPEA) the Chamber of Commerce of Industry (CCIWA), and the Petroleum Club of Western Australia, our company representatives are involved in many committees, events, and hosting tours of company operations for a range of key stakeholders including investors, Parliamentary representatives and the Australian media.

Quadrant Energy hosts its headquarters in Australia's oil and gas capital city Perth, with a Western Australian based staff.

Western Australia has the right address and the right resource base to develop its position on the world stage. As a province rich in a diverse portfolio of minerals and energy, Quadrant Energy looks forward to its role in providing the energy for the development of Western Australia.
